Contents

What is Clostridium difficile?

What factors predispose patients to C. difficile infection?

How does Clostridium difficile infection (CDI) present?

What should I do if I suspect my patient has CDI?

What do I do if CDI is confirmed?

How does C. difficile spread?

Why should I not use alcohol hand rub for hand hygiene when caring for patients with CDI?

Fig 1: Management of patient with C. difficile infection in primary care

How should patients with confirmed CDI be managed in a nursing home?

How should patients with confirmed CDI be managed at home?

What information is available in Ireland on C. difficile?

Figure 2: Age and Sex distribution of CDI in Ireland, 2011 (Source, HPSC)

What information do we have on C. difficile infection outside acute hospitals?

What is Clostridium difficile 027?

Where can I get further information (factsheets/guidelines etc)?

Description

This newsletter aims to highlight HCAI/AMR issues relevant to general practice. In this issue, we look at Clostridium difficile and what GPs need to know about managing known or suspected cases in the community setting.
