  3. International Benchmarking of Health Services
  4. Baseline Scenario: Demand and Capacity Projections
  5. Policy Analysis
  6. Stakeholder Engagement
  7. Impact of Alternative Care Models
  8. Conclusions and Recommendations
- Appendices

## Description

The Health Service Capacity Review forecasts future capacity requirements in acute hospitals, primary care and in services for older persons (residential and homecare services) for the period to 2031. The analysis takes account of current levels of demand and capacity, demographic and non-demographic factors that will drive future demand, and the potential impact that key system reforms can have on capacity needs.
