## **Contents**

Using this book in learning and teaching

The principles and practice of evidence based health care

Approaching the literature

Papers that report drug trials (randomised controlled trials of therapy)

Numbers needed to treat, odds ratios, and confidence intervals

Papers that address prognosis or harm (cohort studies)

Papers that report diagnosis or screening tests

Papers that summarise other papers (systematic review and meta-analysis)

Papers that go beyond numbers (qualitative research)

Papers that analyse very rare events (case control studies)
